

# Superior performance when applications get tough

## Measurement principle

The level of the product in the tank is measured by radar signals transmitted from the antenna at the tank top. After the radar signal is reflected by the product surface, the echo is picked up by the antenna. As the signal is varying in frequency, the echo has a slightly different frequency compared to the signal transmitted at that moment. The difference in frequency is proportional to the distance to the product surface, and level can be accurately calculated. This method is called Frequency Modulated Continuous Wave (FMCW).

Applications with turbulence, foam, long measuring ranges, disturbing objects, or low dielectric constants can reduce the energy reflecting back and, in worst case, eliminate it completely with the result that no surface can be detected. The reflection intensity can however be improved by using a highly sensitive radar, the optimal antenna type, and as large antenna as possible.

## Radar technology benefits

- Direct level measurement means virtually no compensation is needed for changing process conditions (such as density, conductivity, temperature, pressure, viscosity, pH, dielectric etc.) which results in high application flexibility
- Accurate, reliable measurement that requires no re-calibration, meaning improved uptime
- The non-contacting radar transmitter with no moving parts means minimized maintenance
- Good for dirty, coating, crystallizing, and corrosive applications
- Top down measurement means simple installation with no empty tank requirements, and minimized risk for leakages

## Special 5600 features

### For the most challenging applications

- 4-wire transmitters with maximum sensitivity and performance
- Suitable for solids, liquids, and slurries with rapid level changes and challenging process conditions
- Manages high pressures and temperature
- Handles long measuring ranges
- Application flexibility with a wide selection of materials, process connections, antenna styles, and accessories

### Best performance and uptime

- The power of 4 wires provides the highest sensitivity and the ability to detect weak radar echoes in challenging process environments
- Smart EchoLogic with registration of disturbance echoes provides the ability to handle weak echoes reliably and identifies the true echo from the clutter
- Ability to handle disturbing factors, longer measuring ranges, and lower dielectrics
- Greater measurement reliability margins result in less downtime, higher safety, and better quality

### Robust design reduces costs and increases safety

- The detachable transmitter head allows the tank to remain sealed
- The dual compartment housing separates cable connections and electronics, which provides safer handling and improved moisture protection
- Adjustable power supply, 24-240 Vac/dc, 0-60 Hz
- Interchangeable transmitter heads and antennas
- Allows for easy replacement by standard tank connections

Full range of antenna styles

Low DK solids including lime, cement, fly ash, corn, and many more

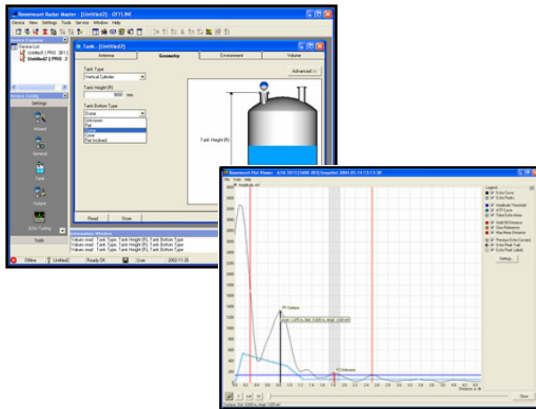

The Smart Wireless THUM Adapter enables level communication for additional level information and diagnostics

Rosemount 2210 configurable display with temperature input

The Rosemount Radar Master enables easy configuration and service with a user-friendly interface including wizards, echo curve with movie feature, offline/online configuration, extensive online help, logging capabilities, and much more.

## Easy installation and plant integration

- Seamless system integration with HART®, Modbus®, or IEC 62591 (WirelessHART®) with the Smart Wireless THUM™ Adapter
- Secondary analog 4-20 mA output
- MultiVariable™ output includes the choice of level, distance, volume, and signal strength
- Pre-configured or easy, user-friendly configuration in Rosemount Radar Master with a five-step wizard, auto connect, and online help
- Any DD-compatible configuration tool such as AMS™ Device Manager, or Field Communicator can be used
- Fully configurable with the remote- or factory-mounted LOI Rosemount 2210 with temperature input option

## Minimized maintenance reduces cost

- Non-contacting, no mechanical moving parts that require maintenance
- No re-calibration or compensation needed due to changing process conditions
- The user-friendly software provides easy online troubleshooting with the echo curve tool, registration of disturbance echoes, and logging
- Predictive maintenance with advanced diagnostics and PlantWeb™ alerts
- Adjustments without opening the tank

## Ordering Information

Rosemount 5601 Radar Level Transmitter is a reliable 4-wire radar level transmitter designed for outstanding performance in a wide range of applications and process conditions. Product features include:

- Configurable remote display or local operator interface
- Extensive selection of antennas and materials
- HART 4-20 mA, Modbus, or IEC 62591 (*WirelessHART*) with the Smart Wireless THUM Adapter

### Additional information

Specifications: [page 15](#)

Product Certifications: [page 28](#)

Dimensional Drawings: [page 31](#)

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See [page 24](#) for more information on Material Selections.

05600-1811-0431	4 inch Class 300	Acc. To ASME B16.5	SST 316L <sup>(1)</sup>
05600-1811-0611	6 inch Class 150	Acc. To ASME B16.5	SST 316L <sup>(1)</sup>
05600-1811-0811	8 inch Class 150	Acc. To ASME B16.5	SST 316L <sup>(1)</sup>
05600-1810-0231	DN50 PN40	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>
05600-1810-0311	DN80 PN16	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>
05600-1810-0331	DN80 PN40	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>
05600-1810-0411	DN100 PN16	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>
05600-1810-0431	DN100 PN40	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>
05600-1810-0611	DN150 PN16	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>
05600-1810-0811	DN200 PN16	Acc. To EN 1092-1	EN 1.4404 <sup>(2)</sup>

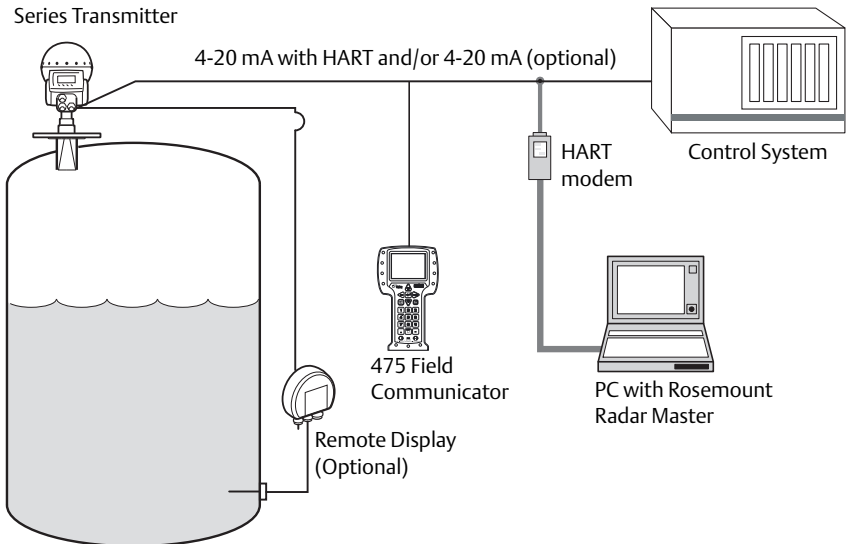

(1) Use gasket type Ia.

(2) Gasket type according to EN 1514-1 and bolting according to EN1515-2.

# Specifications

## Functional specifications

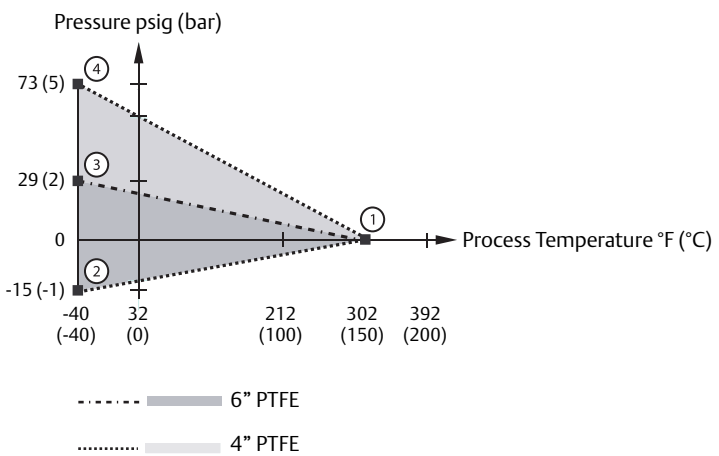

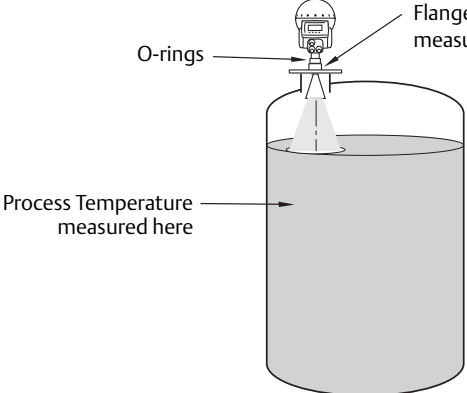

General	
Field of Application	<b>Liquids, slurries, and solids</b> <ul style="list-style-type: none"> <li>■ Process vessels with agitators</li> <li>■ Still-pipe or bridle-pipe mounting</li> <li>■ Small nozzle openings on tanks with short measuring range</li> <li>■ Various types of solid materials</li> </ul>
Measurement Principle	10 GHz Frequency Modulated Continuous Wave (FMCW) radar (see <a href="#">“Measurement principle” on page 2</a> for details).
Microwave Output Power	Max 1.0 mW
Power Consumption	Maximum 10 W, Nominal 5 W
Beam Angle	See <a href="#">Table 14 on page 23</a> .
Internal Calibration	Internal digital reference for automatic compensation of radar sweep
Signal Processing	Powerful and advanced digital signal processing using Fast Fourier Transform (FFT) and advanced echo handling software.
External Power Supply	<p>Ultra wide 24-240 Vac or dc 0-60 Hz</p> <p>The transmitter head has two separate junction boxes. One is for a Non-Intrinsically Safe (Non-IS) primary signal output and power supply cables. The other is normally used for Intrinsically Safe (IS) HART/analog outputs, or optionally, for a non-IS secondary analog output.</p> <p>Primary Output is HART, either IS or Non-IS. The HART and secondary analog outputs can be either active or passive.</p> <hr/> <p><b>Note</b></p> <p>The minimum power required at the transmitter power terminals is 20 V.</p> <hr/>
Outputs	<p><b>Primary output</b></p> <p>Alternative 1: HART + 4-20 mA current loop (non-IS or IS option)</p> <p>Alternative 2: RS-485 with Modbus communication</p> <p><b>Secondary outputs</b></p> <p>Analog 4-20 mA current loop, active (with power supplied by the Rosemount 5600) or passive (for loop-supplied power) (Optional - see <a href="#">page 6</a>)</p>
Temperature Measurement (optional)	1-3 spot elements, PT100 or Cu90, or 6 spot elements with common return. Input accuracy $\pm 0.9^{\circ}\text{F}$ ( $\pm 0.5^{\circ}\text{C}$ ). Average temperature or individual spots as output.

4-20 mA HART and secondary outputs (optional) (output option code 5A - 5D) - (see “Primary output ” in Table 1 on page 5)	
Output	<p>HART Revision 5, analog 4-20 mA current loop, and Secondary 4-20 mA Output (Optional, active or passive)</p> <p><b>HART</b> COMMUNICATION PROTOCOL</p> <p>Rosemount 5600 Series Transmitter</p>  <p>4-20 mA with HART and/or 4-20 mA (optional)</p> <p>Control System</p> <p>HART modem</p> <p>475 Field Communicator</p> <p>PC with Rosemount Radar Master</p> <p>Remote Display (Optional)</p>
Smart Wireless THUM Adapter	 <p>The optional Smart Wireless THUM Adapter can be mounted directly on the transmitter or by using a remote mounting kit. IEC 62591 (WirelessHART) enables access to multi-variable data and diagnostics, and adds wireless to almost any measurement point. See the <a href="#">Rosemount Smart Wireless THUM Adapter Product Data Sheet</a> (document number 00813-0100-4075) and <a href="#">Smart Wireless THUM Adapter for Rosemount Process Level Transmitter Applications</a> (document number 00840-0100-4026).</p>
Galvanic Isolation	>1500 V RMS or DC
IS Electrical Parameters	See “Product Certifications” on page 28.
Signal on Alarm (configurable)	Standard: Low=3.8 mA, High=22 mA or freeze, NAMUR NE43: High=22.50 mA, Rosemount: Low=3.75 mA
Output Impedance	>10 MΩ
Analog Output Characteristics (Passive or Active Out Options)	7-30 V
Load Limitations	<700 Ω (passive output with 24 V external supply) <300 Ω (active output)

Display and configuration	
Display	<b>Factory mounted (Option code P)</b> The Rosemount 2210 offers basic configuration using the 4 soft keys on the display. Data presentation on the LCD can be customized and allows many viewing alternatives by: <ul style="list-style-type: none"> <li>■ 6-digit graphical LCD display, 128 x 64 pixels</li> <li>■ 7 text lines with 16 characters/line</li> </ul>
	<b>Remote mounted (Option Code R and T for temperature inputs)</b> The Rosemount 2210 is available as remote mounted and has optional temperature inputs (1-3 spot elements PT100 or CU90)
Diagnostics	Failures: level, temperature, and volume measurement failure Warnings: empty tank, full tank, database, hardware, software, and configuration warnings Errors: database, hardware, software, and configuration warnings
Configuration Tools	Emerson® Field Communicator (e.g. 375/475 Field Communicator), Rosemount Radar Master (RRM) software package (included with delivery of transmitter), Emerson AMS Device Manager or DeltaV® or any other Device Description (DD) compatible host systems. Certificates are available from all major host system vendors.
	<b>Note</b> <ul style="list-style-type: none"> <li>■ To communicate using RRM or AMS Device Manager, a HART modem is required. The HART modem is available as an RS232 or USB version (see <a href="#">“Accessories” on page 14</a>).</li> <li>■ The transmitter can be pre-configured by selecting option code C1 (see <a href="#">“Software configuration” on page 13</a>) and sending a complete Configuration Data Sheet (CDS). The CDS is available from <a href="http://www.rosemount.com">www.rosemount.com</a>.</li> </ul>
Output Units	Level and Distance: ft, inch, m, cm, or mm Volume: ft <sup>3</sup> , inch <sup>3</sup> , US gals, Imp gals, barrels, yd <sup>3</sup> , m <sup>3</sup> , or liters Level Rate: ft/s, m/s Temperature: °F, °C
Output Variables	Level, Distance, Volume, Level Rate, Signal Strength, Used defined, Temperature (1-6), and Average Temperature
Damping	0-60 s (2 s, default value)

Temperature and pressure limits	
Ambient Temperature	-40 to 70 °C (-40 to 158 °F) LCD Readable between: -20 to 70 °C (-4 to 158 °F)
Process Temperature and Pressure	<p>The final rating depends on antenna, tank seal, and O-ring selection. See <a href="#">Table 11 on page 19</a> for further details.</p> <p><b>Rosemount 5600 with cone antenna and extended cone antenna<sup>(1)</sup></b></p> <p>Pressure psig (bar)</p> <p>Process Temperature °F (°C)</p> <p>--- Cone, Quartz tank seal ..... Cone, PTFE tank seal</p> <p>① 145 psig at 212 °F / 10 bar at 100 °C ② 73 psig at 392 °F / 5 bar at 200 °C ③ -15 psig at 392 °F / -1.0 bar at 200 °C ④ 798 psig at 752 °F / 55 bar at 400 °C</p> <p><b>Rosemount 5600 with cone antenna - integrated flushing connection<sup>(1)</sup></b> Maximum 145 psig at 392 °F (10 bar at 200 °C) or up to 145 psig at 752 °F (10 bar at 400 °C). See <a href="#">Table 4 on page 10</a> for more information.</p> <p><b>Rosemount 5600 with parabolic antenna</b></p> <p>Pressure psig (bar)</p> <p>Process Temperature °F (°C)</p> <p>--- 45S, Clamped version, low pressure ..... 46S, Welded version, high pressure</p> <p>① 145 psig at 392 °F / 10 bar at 200 °C ② 2.9 psig at 392 °F / 0.2 bar at 200 °C ③ -2.9 psig at 392 °F / -0.2 bar at 200 °C</p>

Process Temperature and Pressure (continued)	<p><b>Rosemount 5600 with process seal antenna</b></p>  <p>① 0 psig at 302 °F / 0 bar at 150 °C          ② -15 psig at 40 °F / -1.0 bar at -40 °C          ③ 29 psig at -40 °F / 2 bar at -40 °C          ④ 73 psig at -40 °F / 5 bar at -40 °C</p>
ASME / ANSI Flange Rating	According to ASME B16.5
EN Flange Rating	According to EN 1092-1
Temperature Rating Considerations	 <p><b>Note</b>              Flange temperature depends on mounting conditions, such as nozzle position, distance to maximum product level, nozzle height, presence of insulation, etc.</p>

(1) Pressure rating may be lower depending on flange selection. Minimum / maximum flange temperature rating depends on O-ring selection. For further information, see [Table 11 on page 19](#).

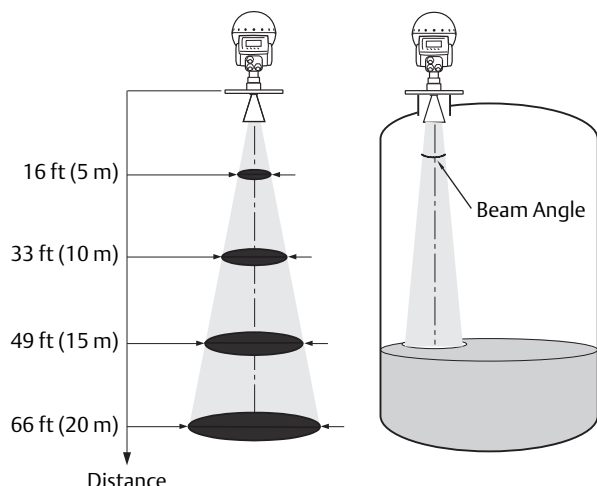

**Table 11. Flange Temperature Range Depending on O-ring Selection**

O-ring material	Minimum temperature °F (°C) in air	Maximum temperature °F (°C) in air
Viton Fluoroelastomer	5 (-15)	392 (200) <sup>(1)</sup>
Kalrez 6375 Perfluoroelastomer	-4 (-20)	392 (200) <sup>(1)</sup>
Ethylene Propylene (EPDM)	-40 (-40)	266 (130)
Nitrile butadiene (NBR)	-31 (-35)	230 (110)

(1) For Quartz seal maximum process temperature is 752 °F (400 °C), provided that the O-rings do not exceed the temperature listed in [Table 11](#) above. O-rings are not pressure retaining in this configuration.

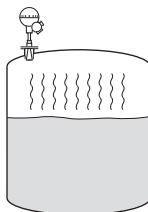

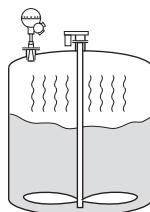

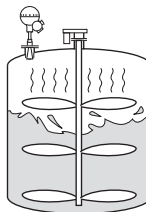

## Performance specifications

General	
Reference Conditions	Metal plate with no disturbing objects Temperature: 68 °F (20 °C) Pressure: 14 - 15 psi (960 - 1060 mbar) Humidity: 25 - 75% RH Reference Measuring Range: 1.64 - 98 ft. (0.5 - 30 m)
Instrument Accuracy (under reference conditions)	±0.2 in. (±5 mm)
Repeatability	±0.04 in. (±1 mm)
Resolution	0.04 in. (1 mm)
Ambient Temperature Effect	±500 ppm of measured distance within the ambient temperature range
Update Interval	100 ms
Linearity	±0.01%
Analog Out Temperature Drift	±28 ppm/°F (±50 ppm/°C)
Analog Out Accuracy	±300 µA at 4 mA ±600 µA at 20 mA
Analog Out Resolution	0.5 µA (0.003%)

Measuring range	
Measuring Range and Minimum Dielectric Constant	<p>0-164 ft. (0-50 m) Standard 0-324 ft. (0-99 m) Optional, requires special configuration</p> <p>The measuring range depends on:</p> <ul style="list-style-type: none"> <li>■ antenna type</li> <li>■ the dielectric constant of the liquid (<math>\epsilon_r</math>) (min. <math>\epsilon_r=1.4</math>)</li> <li>■ process conditions</li> </ul> <p>See <a href="#">Table 12 on page 22</a> and <a href="#">Table 13 on page 23</a> for measuring range and minimum dielectric constant values. For more information, ask your local Emerson Process Management representative.</p> <p>For liquids with <math>\epsilon_r</math> that are smaller than 1.8 such as liquefied gases, an 8-inch or bigger diameter antenna is recommended if measurement is done with free propagation. In this case, the measuring range in calm surface tanks is 50 ft (15 m).</p> <p>The 5600 transmitter installed in a pipe can measure products with a dielectric <math>\geq 1.4</math>.</p>
Beam Angle and Beamwidth	<p>For detailed information on the beam angle and beam width for the Rosemount 5600 Series, see <a href="#">Table 14 on page 23</a>.</p>  <p>The diagram illustrates the beam angle and beamwidth of the Rosemount 5600 Series. It shows two scenarios: free propagation and measurement in a tank. In free propagation, the beam width increases with distance, with markers at 16 ft (5 m), 33 ft (10 m), 49 ft (15 m), and 66 ft (20 m). In a tank, the beam is reflected by the liquid surface, and the 'Beam Angle' is indicated.</p>
Environment	
Vibration Resistance	IEC 721-3-4 class 4M4
Electromagnetic Compatibility	Emission and Immunity: EMC directive 204/108/EC. EN 61326-1:2006. Immunity 50081-2. Emission 50081-1.
EU Directive Compliance	Complies with 93/98/EEC
Transient / Built-in Lightning Protection	EN61326, EN61000-4-5, IEC801-5, level 2 kV
Humidity	IEC 60068-2-3

Radio Approvals	<p>FCC: Part 15C (K8CPRO &amp; K8CPROX: Note: This device must be professionally installed and is only authorized for use on sealed metal links)</p> <p>R&amp;TTE: ETSI EN 302 372 (Note: This device must be installed at a permanent fixed position at a closed (not open) metallic tank or reinforced concrete tank, or similar enclosure structure made of comparable attenuating material)</p> <p>IC: RSS210-5 (2827A- 5600PRO)</p>
Climatic Class/Corrosion Class	IEC 68-2-1, IEC 60068-2-52 test KB severity 2
UV Protection	ISO 4892-2
Power Supply Fluctuation	IEC 92 Part 504 sec. 3.5

## Physical specifications

Material selection	
Material Selection	Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.
Housing and enclosure	
Type	Two separate junction boxes that separate electronics from cabling. The transmitter housing can be rotated in any direction, and has interchangeable electronics without opening the tank.
Electrical Connections	<p>3 X ½ inch NPT; for cable glands or conduit entries</p> <p>Optional: 1/2 inch NPT Cable Gland Kit, 1/2 inch NPT / M20 Adapters (Set of 3)</p> <p>Optional remote display (option code R and T): 2 x M20 Entries, 1 x M25 Entry; max. cable length display - radar transmitter: 330 ft (100 m)</p> <p>The recommended output cabling is a 4-wire, twisted and shielded instrument cable, min. 0.5 mm<sup>2</sup> (AWG 20).</p>
Housing Material	Permanent moulded cast aluminum, chromed and powder painted
Ingress Protection	IP66, IP 67, and NEMA 4
Ingress Protection - Remote Display	IP 67, mounted in separate enclosure with weather/dirt protection cover
Factory Sealed	See CSA Approvals information on <a href="#">page 28</a> .
Weight	Transmitter Head (TH): 19.8 lb (9.0 kg)
Engineered solutions	
Rxxxx	<p>When standard model codes are not sufficient to fulfill requirements, please consult the factory to explore possible Engineered Solutions. This is typically, but not exclusively, related to the choice of wetted materials or the design of a process connection. These Engineered Solutions are part of the expanded offerings and may be subject to additional delivery lead time. For ordering, factory will supply a special R-labeled numeric option code that should be added at the end of the standard model string. See example model string below.</p> <p>Example Model String: 5601-A-E1-P-5A-0-P-E-24S-P-V-NR-<b>R1234</b></p>

Tank connection and antennas	
Tank Connection	<p>The tank connection consists of a tank seal and a flange.</p> <p>Cone antennas, except for the Cone antennas with Integrated Flushing Connection, are designed with a protective plate. The plate and antenna (SST or optional material) together with the tank seal (PTFE or Quartz) and o-rings are the wetted parts exposed to the tank atmosphere. This allows the use of an existing flange, or a lower cost flange alternative.</p> <p>Loose flanges are also available (see <a href="#">Table 10 on page 14</a>).</p> 
Flange Dimensions	<p>Follow ASME, EN standard Material: Stainless steel 316L and Stainless Steel EN 1.4404</p>
Antennas	<p>Cone, Parabolic, and Process Seal antennas. Extended Cone Antennas are available in SST 316L. Cone Antennas are available with flushing connections (½-in. NPT).</p> <p><b>Cone antenna</b></p> <ul style="list-style-type: none"> <li>■ Suitable for free-propagation and pipe-mounted installation</li> <li>■ Cone extensions are available (see <a href="#">Table 3 on page 9</a>)</li> <li>■ Optional Cone antennas with cleaning/flushing connection are available (see <a href="#">Table 4 on page 10</a>)</li> </ul> <p><b>Parabolic antenna</b></p> <ul style="list-style-type: none"> <li>■ Suitable for solid materials (for example, cement)</li> <li>■ Withstand heavy contamination</li> <li>■ Can be equipped with a PTFE protective cover to reduce the effects of dusty environments</li> </ul> <p><b>Process seal antenna</b></p> <ul style="list-style-type: none"> <li>■ The dish of the Process Seal is made of PTFE</li> <li>■ Only exposes material suitable for hygienic or corrosive applications (see <a href="#">Figure 5 on page 33</a> and <a href="#">Table 6 on page 12</a>)</li> </ul>
Antenna Dimensions	<p>Cone Antenna: See <a href="#">Figure 1 on page 31</a> Extended Cone Antenna: See <a href="#">Figure 2 on page 31</a> Cone Antenna with Integrated Flushing Connection: See <a href="#">Figure 3 on page 32</a> Parabolic Antenna: See <a href="#">Figure 4 on page 32</a> Process Seal Antenna: See <a href="#">Figure 5 on page 33</a> and <a href="#">Table 16 on page 33</a></p>
Antenna Weight	<p>3-in. Cone Antenna: 2.20 lb. (1.0 kg) 4-in. Cone Antenna: 3.31 lb. (1.5 kg) 6-in. Cone Antenna: 4.41 lb. (2.0 kg) 8-in. Cone Antenna: 6.61 lb. (3.0 kg) Parabolic Antenna: 17.6 lb. (8.0 kg) 4-in. Process Seal Antenna: 4.41 lb. (2.0 kg) 6-in. Process Seal Antenna: 5.51 lb. (2.5 kg)</p>

Material Exposed to Tank Atmosphere	<p><b>Cone antenna (PTFE sealing)</b></p> <ul style="list-style-type: none"> <li>■ Antenna: 316L SST (EN1.4404) or Alloy C-22 or Alloy 400</li> <li>■ Sealing: PTFE fluoropolymer</li> <li>■ O-rings: Viton fluoroelastomer or Kalrez 6375 perfluoroelastomer or Ethylene propylene or Nitrile butadiene</li> </ul> <p><b>Cone antenna (Quartz sealing)</b></p> <ul style="list-style-type: none"> <li>■ Antenna: 316L SST (EN1.4404) or Alloy C-22 or Alloy 400</li> <li>■ Sealing: Quartz or Graphite</li> <li>■ O-rings: Viton fluoroelastomer or Kalrez 6375 perfluoroelastomer</li> </ul> <p><b>Parabolic antenna</b></p> <ul style="list-style-type: none"> <li>■ Antenna: 316L SST</li> <li>■ Sealing: FEP/PTFE fluoropolymer</li> </ul> <p><b>Process seal antenna</b></p> <ul style="list-style-type: none"> <li>■ Antenna: PTFE fluoropolymer</li> </ul>
<b>Installation and mounting considerations</b>	
Mechanical Mounting Considerations	<p>The 5600 radar transmitter is easily carried to the tank top and mounted on a suitable nozzle or pipe.</p> <p>The radar transmitter should be installed as follows:</p> <ul style="list-style-type: none"> <li>■ Antenna oriented perpendicular to a horizontal surface.</li> <li>■ The transmitter should be mounted with as few fittings as possible within the beam angle.</li> <li>■ Filling inlets creating turbulence should preferably be kept at a distance.</li> <li>■ Choose as large antenna diameter as possible. A larger diameter concentrates the radar beam and ensures maximum antenna gain. Increased antenna gain offers greater reflection of weak surface echoes.</li> </ul> <div data-bbox="532 1199 862 1535"> <p>0.4 in. (10 mm) or more<sup>(1)</sup></p> <p>24 in. (600 mm)<sup>(2)</sup></p> </div> <p>(1) For best measurement performance the nozzle height should be shorter than the antenna or consider an extended cone (see <a href="#">Figure 2 on page 31</a>) for your current transmitter.</p> <p>(2) Recommended minimum distance for all antennas. (Shorter distance may apply, consult factory).</p>
Pipe/Chamber Installations	<p>If used correctly, pipe or chamber measurement can be advantageous in many applications:</p> <ul style="list-style-type: none"> <li>■ Use cone antennas (3 to 6 in.)</li> <li>■ The gap between the cone antenna and the still-pipe is limited to 0.4 in. (10 mm)</li> </ul>

# Product Certifications

## Approved Manufacturing Locations

Rosemount Tank Radar AB – Gothenburg, Sweden

## FCC and IC Approvals

This device complies with Part 15 and Part 90 of the FCC Rules.  
This device complies with IC RSS210.

## Ordinary Location Certification for Factory Mutual

As standard, the transmitter has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by FM, a nationally recognized testing laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

## EU Conformity

The most recent revision of the EC declaration of conformity can be found at [www.rosemount.com](http://www.rosemount.com).

## Canadian Registration Number (CRN)

The product design of the Cone and the Parabolic Antenna has been accepted and registered for use in Canada.

Cone Antenna	CRN: 0F15641.5
Parabolic Antenna	CRN: 0F15904.5

## Overfill Protection Certificates

DIBt Certificate No.: Z-65.16-417

**U1** TÜV - tested and DIBt approved for overfill protection according to the German WHG regulations.

## Hazardous locations certifications

### North American certifications

#### Factory Mutual (FM) Approvals

**E5** Explosion-proof

##### 5600 Series Transmitter

Certificate No.: 4D5A9.AX

Explosion-proof for use in Class I, Division 1, Groups A, B, C and D, T6; Dust-Ignition-proof for use in Class II, III, Division 1, Groups E, F and G, T5; Ta= +70 °C; Type 4X.

Explosion-proof for use in Class I, Division 1, Groups A, B, C and D with Intrinsically Safe Connections to Class I, Division 1, Groups A, B, C and D, T6; Dust-Ignition-proof for use in Class II, III, Division 1, Groups E, F and G, T5, Ta=+70 °C; Type 4X; in accordance with Entity requirements and system control drawing 9150074-994.

#### 2210 Display Unit

Certificate No.: 3008356

Intrinsically Safe (Entity) for use in Class I, Division 1, Group A, B, C, and D; Ta=+70 °C; Type 4; T4; in accordance with Entity requirements and system control drawing 9150074-997.

Ex de [ia] IIC T6 Ga/Gb ( $-40^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$ )Ex t IIIC T85  $^{\circ}\text{C}$  Db IP65

Rated 24 - 240V DC/AC; 10W;

*Intrinsically Safe Display Output with entity parameters:* $U_o = 7.84\text{ V}$ ;  $I_o = 385.6\text{ mA}$ ;  $P_o = 0.678\text{ W}$ ;  $C_i = 0$ ;  $L_i = 0$ ; $C_o = 9.3\text{ }\mu\text{F}$ ;  $L_o = 239\text{ }\mu\text{H}$ ;  $L_o/R_o = 52.8\text{ }\mu\text{H}/\text{ohm}$ *Intrinsically Safe Inputs with entity parameters:***Passive 4-20 mA /HART model** (Label identification = HART passive)

Voltage compliance 7-30 V

 $U_i = 30\text{ V}$ ;  $I_i = 200\text{ mA}$ ;  $C_i = 0$ ;  $L_i = 0$ ;  $U_o = 0$ ;  $I_o = 0$ ; $U_m = 250\text{ V}$ *Intrinsically Safe Outputs with entity parameters:***Active 4-20 mA /HART model** (Label identification = HART active) $U_o = 23.1\text{ V}$ ;  $I_o = 125.7\text{ mA}$ ;  $P_o = 0.726\text{ W}$ ;  $C_{\text{ext}} = 0.14\text{ }\mu\text{F}$ ; $L_{\text{ext}} = 2.2\text{ mH}$ ;  $C_i = 0$ ;  $L_i = 0$ **Display Interface** $U_o = 7.21\text{ V}$ ;  $L_{\text{ext}} = 0.315\text{ mH}$ ;  $I_o = 336\text{ mA}$ ;  $C_i = 0$ ; $P_o = 0.547\text{ W}$ ;  $L_i = 0$ ;  $C_{\text{ext}} = 25\text{ }\mu\text{F}$ ;  $L_o/R_o = 65\text{ }\mu\text{H}/\text{Ohm}$ **Special Conditions for Safe Use (X):**

As light alloys may be used as the enclosure (or other parts) they may be at the accessible surface of this equipment, in the event of rare incidents, ignitions sources due to impact and friction sparks could occur. This shall be considered when the equipment is being installed in locations that specifically require Group II, Category 1G equipment.

Under certain extreme circumstances, the non-metallic parts of the equipment may be capable of generating an ignition-capable level or electrostatic charge. Therefore, when used for applications that specifically require Group II, Category 1 equipment, the equipment shall not be installed in a location where the external conditions are conducive to the build-up of electrostatic charge on such surfaces. Additionally, the equipment non-metallic parts shall only be cleaned with a damp cloth.

**2210 Display Unit**

Certificate No.: Sira 00ATEX2062
